Automatic Vicat Apparatus

DESCRIPTION:

The automatic Vicat Apparatus is used to determine the setting time and consistency of the cement mortar by using the Vicat method. The penetration depth is measured by a sensor with a 0.1mm resolution.

Along with hardening process development, the penetration depth decreases when it matches some thresholds pre-defined by standards initial and final setting times are measured and recorded.

The entire test is made in a fully automatic cycle and provides precise and repeatable results. The results are then printed on the integrated printer.

The Automatic Vicat Apparatus consists of: Windows Software and RS232 Cable, consistency plunger, initial needle, final needle, and mold.
